# TRANSLATING CLINICAL DATA INTO VALUABLE ACTIONABLE INTELLIGENCE

## The Anvita™ Insight analysis engine: The most powerful tool to help you leverage your clinical data.

The Anvita Insight analysis engine is versatile, robust, and scalable, capable of accomplishing with one single engine what it typically takes several software components to achieve.

### Core Anvita Insight engine capabilities include:

- Clinical decision support that includes all 44 meaningful use clinical quality measures for eligible professionals, and provides a path to meaningful use Stages 2 and 3 and prospective alerts for closing gaps in care
- Leveraging all forms of available clinical data to bring your patients and populations into sharper focus
- Full analytics and reporting suite to give you the actionable information to reduce avoidable clinical costs and improve your populations' health, particularly for high-cost health care services, such as high-tech imaging, specialty pharmaceuticals or specialty laboratory testing

## Anvita Focus rules management: maximum flexibility for your unique clinical needs

The Anvita Focus web-based rule authoring and rule management tool gives you the power and precision to direct your analyses according to your or your client's individual analysis needs.

- Choose from nearly 30,000 meaningful use, HEDIS, gap-in-care, and drug safety rules
- Create or modify your own rules using Anvita's flexible rule authoring tool
- Anvita Health rules are based on evidence-supported guidelines from more than 50 industry sources, and are maintained by a team of experienced physician informaticists
- Adjust rule selection and priorities as often as you like to accommodate your changing populations

## Anvita Health Thesaurus maximizes clinical data from all available sources:

The Anvita Health Thesaurus function of our analytics engine makes optimal use of all clinical data available to create a true 360-degree view of your patients and populations. Data sources include:

- Medical claims
- Pharmacy claims
- Lab values
- Electronic medical records
- Care manager health risk assessment
- Personal health records
- Formulary benefit design
- Consumer health risk assessment

## Anvita Insight engine implementation: A professional services approach

To facilitate ease of implementation and integration of the Anvita Insight engine into an enterprise environment, Anvita Health takes a professional services approach, from consulting to reporting.

The Anvita Health-client relationship is built on the foundation of a dedicated team of critical resources, including clinical, technical and business subject matter experts.

## Anvita Health accommodates your IT standards:

The Anvita Health solution runs in the most common enterprise environments, including Oracle, LINUX, Windows, Apache and more.

Our data-mapping, data cleanse and ETL processes ensure stronger, more accurate analyses.

Anvita Health can service your locally hosted implementation to leverage your existing security standards, or host it within the Anvita Health network, or a hybrid of both.

## Batch Mode, Real-time Analysis, or Both

While Anvita Health delivers batch mode analytics and reporting, it is also a pioneer in true real-time analysis. As you build your clinical analytics strategy, you'll need to determine whether batch-mode analytics will suffice to help you meet your long-term objectives.

Anvita Health's real-time analytics enables a broader set of clinical rules and analytics functions, and makes patient interventions more effective because they take place at the point of care. Our true real-time analysis isn't just on-demand access to batch-analyzed data—Anvita Health provides true analytics incorporating new data with all other patient data points, delivering results in milliseconds.

## ANVITA HEALTH'S SOLUTIONS ADDRESS TODAY'S HEALTH CARE CHALLENGES:

- Effective health care resource utilization—hospital readmission avoidance
- Efficient patient care management across the care continuum
- Improving adherence to evidence-based care guidelines
- Measurement of provider quality
